

Software Solution Architect

We are looking for a Software solution architect for our client located in Brussels the ideal candidate is passionate about change in the field of IT.

As a software solutions architect, you will be part of the IT delivery team. The IT delivery team designs, develops and manages all application chains for our client.

The team is divided into different areas focused on end-to-end business.

A domain can be a chain with a business scope. For example, financial and risk management processes, end-to-end portal processes to administration systems for clients, document handling processes for operations, etc.

Your challenge;

You are part of the field of agile IT distribution: multi-channel retail

On the one hand, you understand enterprise architecture with its principles and translate them into your specific area.

On the other hand, you provide information from your specific domain to drive the enterprise architecture.

You are responsible for making the domain architecture understandable within your team.

You further develop the area according to the needs of the business and you make suggestions for improvement.

You support analysts in translating business needs into concrete solutions in accordance with architectural guidelines.

You support the Scrum teams in choosing their tools. You propose solutions and coordinate them with the enterprise architect.

You are ultimately responsible for ensuring that the implementations conform to the architecture.

You keep the design up to date and develop it further.

You are an active member of the architecture team.

You will work in close collaboration with the IT manager of the domain, the enterprise architect, the security manager and the Scrum teams of your domain.

You are passionate about software solutions architect and you know what it means to translate architecture into concrete technical solutions.

You go the extra mile for our customers and continuously improve the job.

You have an active role in the translation of the business / IT strategy and the target architecture of the company.

You know the security policy and know how to translate and record it in a concrete way.

You actively seek collaboration with other areas of IT delivery and business stakeholders.

You have a clear vision of the (im) possibilities of architecture and how to apply them.

You are passionate about your field and you are aware of technical developments in this field.

You proactively keep your knowledge and skills up to date.

You continue to grow and take charge of less experienced software analysts.

You speak and write English fluently and you are also proficient in French and Dutch, both orally and in writing.

Profile:

Our ideal candidate has at least 10 years of experience in a complex IT environment as a software solutions architect in an insurance company.

You hold a master's degree in computer science or relevant engineering and are known as a passionate IT professional with a keen eye for the provision of functional business solutions, drawing on a solid technical background (technology, platforms- IT forms, LCM, architecture, connectivity, security and risk) of your domain.

Required knowledge:

architectural principles (application, data, integration), patterns, best practices, etc. are known

you have proven experience in application integration and transformation processes;

You have a proven track record of monitoring security and compliance guidelines.

You can leave your mark in the field to propagate the architecture.

you are eager to learn and enjoy sharing your knowledge with others;

You have experience with architectural developments in an agile environment;

technically, we want to have practical experience in the following areas:

in-depth knowledge of Azure

SQL

SOAP, JMS, REST

React and NodeJS

CI / CD pipelines

Test / strategy tool

Knowledge of Salesforce is a plus

Fulltime - starts ASAP and ends December 31, 2021.
